San Jacinto College has established a program designed to give participants a solid foundation in the concepts, tools, and techniques of project management. In today's business environment, organizations must develop project managers who can successfully complete individual projects on time and within budget. San Jacinto College's comprehensive certificate program covers the key processes and core competencies with effective project management practices.

This program covers the full cycle of project management, including project initiation, planning, execution, control, and closing. In addition, it emphasizes the essential human aspects of leading a project team when using recognized and proven concepts and practices. The program curriculum is based on the Project Management Institute's (PMI) Project Management Body of Knowledge (PMBOK®). Our certificate program focuses specifically on the practical and successful application of project management skills in the business world.
