

Online Project Management Certificate Program

Description: San Jacinto College has established a program designed to give participants a solid foundation in the concepts, tools, and techniques of project management. In today's business environment, organizations must develop project managers who can successfully complete individual projects on time and within budget.

Project Management can only be as effective as it is understood. Each employee must be up to speed with how the system works and how it benefits them to actively participate and what exactly they're supposed to do. It's often difficult and expensive, however, to find the time and the skills to perform the appropriate training.

San Jacinto College's course solves these problems. With a suite of ten comprehensive training modules, users are provided a convenient, inexpensive way to orient program users and maintain their proficiency. Your staff accesses these online course modules at their own pace—anytime, anywhere. The key processes and core competencies with effective project management practices.

This training provides a solid foundation in the terminology, tools, concepts and methods of Project Management all based on best practices outlined by the Project Management Institute® (PMI®). The training provides a framework to successfully manage projects, or participate on and support projects. The ultimate goal of this training series is to make your employees successful on projects.

Learning Modules:

- Introduction to Project Management
- Initiating The Project
- Work Breakdown Structure (WBS)
- Scheduling Part 1 & Part 2
- Assigning Human Resources
